

Monolith vs Microservices for Startups

Which one should you choose?

Shivantra.

Perfect for early-stage and validation.

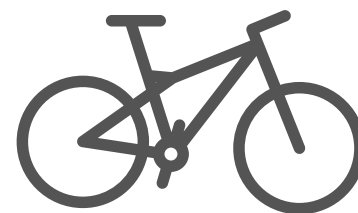

Best for MVP

Small teams

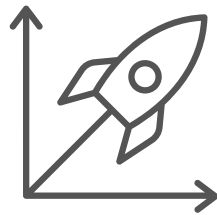

Faster delivery

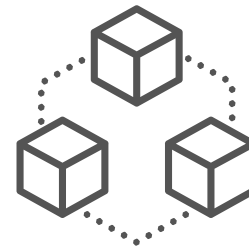

Lower complexity

Great when you already have traction & growth.

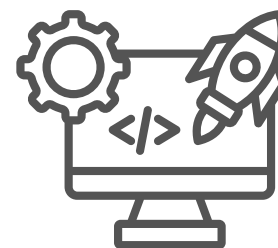

Best for scaling

Independent modules

Team autonomy

Flexible deployments

Common Pitfalls

How to Avoid Them

Premature decomposition

Split only when needed

Ops complexity

Build CI/CD + monitoring early

Poor service boundaries

Define domains clearly

Data duplication

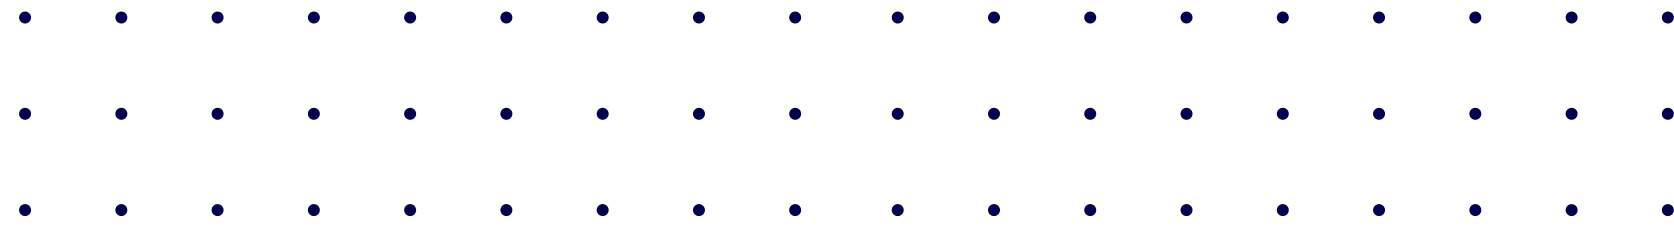

Assign single data ownership

Rising costs

Estimate infra costs in advance

Shivantra.

Rule of Thumb

Choose based on current needs,
not future hypotheticals.

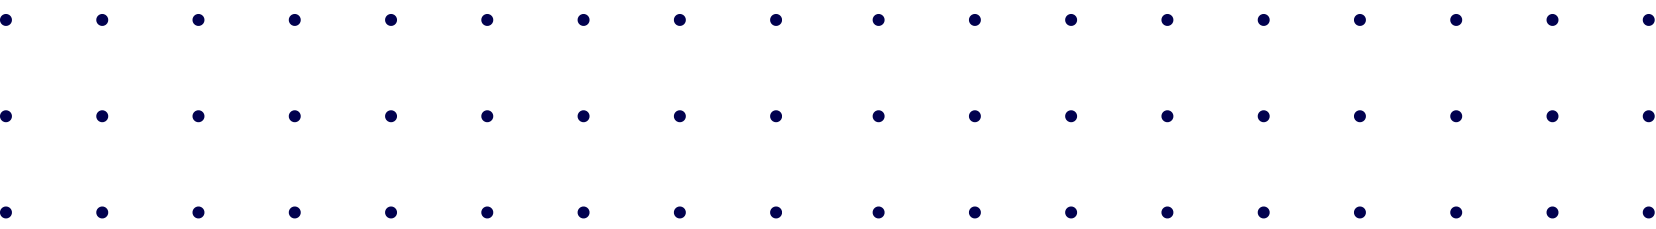

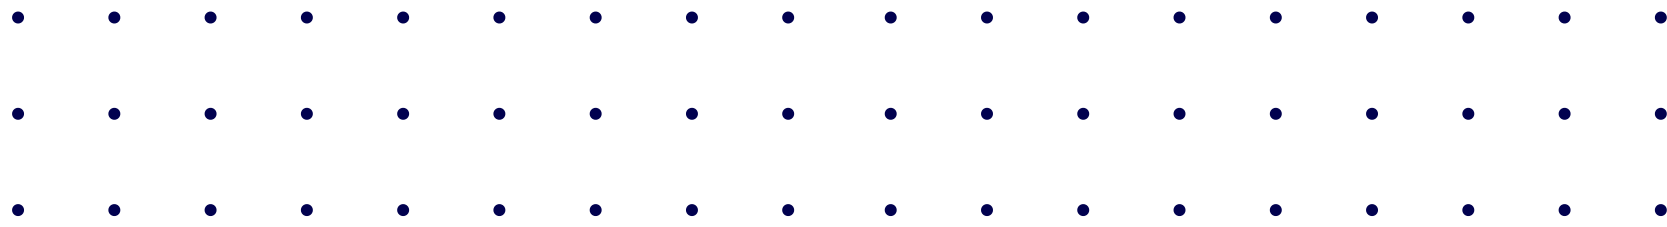

Start simple
Monolith

Scale smart
Microservices

Shivantra.

Shivantra.

We helps startups choose the right path:
fast monoliths today, scalable
microservices tomorrow.
